DA

GIO. BATTISTA CIPRIANI

TOMO III

ROMA
CON PERMESSO

1803

AI GIOVANI STUDIOSI

Essendo sembrato a taluno troppo tedioso il modo di disegnare i profili delle cornici per mezzo di complicate scalette a parti eguali; e non potendo il principiante senza molto incomodo riuscire nelle molte divisioni che si richiedono per la composizione de'membri; così in questo Terzo Tomo per agevolare metodo sì importante di avvezzare a confrontare le parti col tutto, ed a costruire dell'eleganti, proporzionate cornici, abbiam' operato in maniera che le diverse modanature delle nostre Tavole nascano da una sola scaletta divisa in parti eguali; per mezzo dellaquale si rilevi a colpo di occhio la giusta misura di ciascun membro. A tal effetto gioverà non poco l'uso del Triangolo per dividere una retta in parti eguali, che trovasi in fine del Tomo II; qualora non vogliasi usare del Compasso di Proporzione.

Gradite, o Giovani questa mia premura di risparmiare ne'vostri studi ogni fatica possibile, e seguitate dal canto vostro ad animare la mia intrapresa.

COLOSSEO

E sso sorge nel mezzo dell'antica Roma nel luogo detto il cerdiense immaginato da Augulto, fâbbricato da Vespasiano, e dedicato da Tito. Si dice che oltre l'immenas somma di denaro, s'impie gassero so mila schiavi giudei pell'innalzamento di questa vasta mole capace di so mila spetiatori. In oggi e una imponente rovina informe, che per esser tale sarà motivo di continue dispute fra gli studiosi, e gli antiquaj. Nelle nostre tavole si rappresenta ristaurato.

I numeri col punto indicano palmi architettonici romani; gli altri senza once e frazioni .

Le Tavole sono nº XIV.

Regola per descrivere l'ellisse della pianta del Colosseo per mezzo di 8 fuochi

Preso il diametro maggiore dell'arena DB di pal. 384, ed il minore EC di pal. 240, si facciano RL, RH egueli al semiause minore RE fatto centro in H con G in the ventile H G. BASILICA

DI

ANTONINO PIO

BASILICA DI ANTONINO PIO

In oggi dogana di terra in Roma

Le undici colonne, che restano di questo monumento, sembrano appartenere piuttosto ad un Tempio che ad una Basilica, quantunque per tale passi comunemente: Palladio lo denomina Tempio di Marte; altri di Nettuno. Nulla interessandoci le diverse opinioni antiquarie, avvertiamo che quei numeri, i quali nelle seguenti V. Tavole hanno un punto sopra indicano Pal mi Architettonici Romani; gli altri senza il punto, once e frazioni.

TEATRO DE MARCELLO

TEATRO DI MARCELLO

Monumento sorprendente innalzato da Augusto in onore di Marcello suo nipote. Le poche reliquie che ne restano, aggravate ed occupate dalle sabbri che del palazzo Savelli, non bastano a sar concepire l'intera idea della sua costruttura: quel tanto peròche sino ad ora ha superato l'incostanza delle stagioni, e le vicende de'tempi remoti, si riporta nelle seguenti IX. Tav: secondo gli esatti disegni rilevati nel 1754 dagli architetti Perez, Cassillo, e Velasquez.

FORO DI NERVA

180%

FORO DI NERVA

IN ROMA

Due sole colonne più della metà sotterrate sostenenti un cornicione, ed un attico ricchissimo di ornati, si suppongono avanzi di questo Foro, in fondo del qua le esisteva il Tempio di Pallade'.

Nelle nostre XI. Tav. componenti il presente volumetto si è seguita l'idea lasciatacene dal Palladio.

Le misure sono a Palmo architettonico Romano, avvertendo che i numeri col punto sopra indicano Palmi, egli altri senza, once, e frazioni d'oncia.

Anfiteatro di VERONA

1807

ANFITEATRO

DI VERONA

È ignoto da chi fu fatto edificare quest'Anfiteatro, ed in qual epoca. Alcuni sono di opinione che siapiù antico del Colosseo, e dei tempi di Augusto.

Le III. Tav. di questo volumetto sono a misura di Pal. mo architettonico Romano; Quei numeri poi segnaticon punto sopra indicano Palmi, e gli altri senza punto, once e frazioni di oncia.

Tempio di GIOVE SERAPIDE

a Lozzuolo

1807

TEMPIO DI GIOVE SERAPIDE

A POZZUOLO

E parere dei più , che questa fabbrica fosse destinata per quelli che concorrevano a Pozzuolo per cercarela guarigione de' loro mali sotto gli auspiej di Serapide, e perciò vi erano delle stanze di alloggio, ed altri commodi per prendere i salutiferi bagni delle acque termali.

Le III. Tav. che formano il presente volumetto sono a misura di Palmo architettonico Romano, avvertendo che i numeri col punto sopra indicano Palmi, e gli altri senza il punto once e frazioni di oncia.

PINACOTECA

IN ROMA

Salone vastissimo nel centro delle Terme Dioclezia. ne per uso delle conferenze filosofiche, decorato con 8. colonne, che ne sostengono la volta a crociera. .
Quando fu convertito in Chiesa venne per l'umidità rial. zato il pavimento, e vi furono aggiunte altre 8. colonne stuccate, e dipinte a granito.

Nelle VII. Tav. che si danno, quei numeri con un punto sopra indicano Palmi architettonici Romani, e gli altri senza punto once, e frazioni.

Trontispizio di

NERONE

1807

FRONTISPIZIO DI NERONE

IN ROMA

Nel giardino del Principe Colonna sul M. Quirinale si ammira atterrato questo avanzo di architettu ra sorprendente non tanto per la mole, quanto per l'eleganza della scoltura. Si crede che appartenesse al Tempio del Sole fatto edificare da Aureliano.

Nelle III. Tav. che si danno, si avverte che quei numeri distinti con una linea traversa sopra (-) indicanomoduli:, e gli altri senza, parti di modulo: il modulo poi è l'intiero diametro della colonna diviso in parti so.

Maniera facile di ridurre dal grande al piccolo, o dal piccolo al grande qualunque cornice, o modano eseguito per mezzo di scalette a parti uguali, o di altre scale numeriche

Sia B la cornice da ridurui in piccolo. Dal punto δ si abbassi la perpendicolare δ c chevada ad incontrare il lato γ protrato in c, fatto centro successivamente in δ , c con uguale in terrallo δd , if formi a piacers il triangolo i soccale $\delta d e$: a i protraggeno tutte le linee d e modarii fino alla bass δc on ei punti. $(x, \delta, \theta, \phi, \phi) e$ dai quali si conducene altrattanto linee x d, $a \delta d \delta t$. Ovalunque linea parallela alla bass δc , come e f, ρh , δc δt con expression of the proportional halbass δc , e perico le parti di ciascona di queste parallele daramo le raspetti ve altra: di tuna comice, p-es. C, e simile alla data B. Che se si volesse was cornice maggiore di B, si protraggano indefinitanti lati $d \delta c$, c, a si trino della rette o, ρ , σ , τ prarellele a δc : prolungando sulla medasima le rette d, d, a, ϕ , δ , δ , δ , c, c a varamo le respettive misure della comice ricerctat A.
